## **Exercise 1.3**

## Complex polynomials as a product of linear factors

A **complex polynomial** P(z) is a polynomial function of the complex variable z with complex coefficients. It is expressed in the general form as

$$P(z) = a_n z^n + a_{n-1} z^{n-1} + \dots + a_1 z + a_0$$

Where  $a_n$ ,  $a_{n-1}$ , ...,  $a_1$ ,  $a_0$  are complex numbers  $(a_n \neq 0)$ , and  $n \geq 0$  is an integer representing the degree of polynomial.

- ➤ A fundamental property of complex polynomials is that they can always be factored into a product of linear factors.
- $\triangleright$  According to the **fundamental theorem of algebra**, a polynomial of degree  $n \ge 1$  has exactly n roots in complex number system  $\mathcal{C}$ .
- A corollary to this theorem states that any polynomial P(z) of degree n can be factored completely into a constant a and n linear factor over c in the form  $P(z) = a(z-z_1)(z-z_2)...(z-z_n)$  where  $z_1, z_2, ..., z_n$  are complex roots of the polynomial.
- ▶ If P(z) is a polynomial function, the values of z that satisfy P(z) = 0 are called the **zeros of the function** P(z) and roots of the polynomial equation P(z) = 0
- ➤ The **Rational root theorem** is a mathematical tool used to find all possible rational roots of a polynomial equation with integer coefficients. According to rational root theorem:
  - $P(x) = a_n x^n + a_{n-1} x^{n-1} + \dots + a_1 x + a_0$  has integer coefficients, then every rational root  $\frac{p}{q}$  (in simplest terms) satisfies:
- (i) p is a factor of the constant term  $a_0$ .
- (ii) q is a factor of the leading coefficient  $a_n$

## Solution of quadratic equations by completing the square

**Completing square** is a powerful and systematic method for solving quadratic equations.

- 1. Factorize the following:
- (i)  $a^2 + 4b^2$

$$=0^{2}-(-1)4b^{2}$$

$$= \alpha^2 - i^2 4b^2$$

$$= \alpha^2 - (2bi)$$

$$\alpha^2 - b^2 = (\alpha - b)(\alpha + b)$$

$$= (\alpha - 2bi)(\alpha + 2bi) Am$$

(ii) 
$$9a^2 + 16b^2$$

$$=9\alpha^2-(-1)16b^2$$

$$=30^{2}-12.4^{6}$$
